

DANISH KHAN

Full-Stack Developer (MERN Stack) | Next.js / TypeScript / Node.js — AI-Assisted Engineering

Dhanbad, India | +91-9801285586 | danishkha8321@gmail.com | [linkedin.com/in/danish-khan-65a61b38b](https://www.linkedin.com/in/danish-khan-65a61b38b) | github.com/Danish-k997

PROFESSIONAL SUMMARY

Self-taught full-stack developer who ships production software end-to-end, not tutorial clones. Builds with the MERN stack and Next.js/TypeScript/Node.js as the core toolkit, and works daily with AI coding tools (Claude Code, GitHub Copilot) as a force multiplier — using them to accelerate development velocity by an estimated 30–40%, while owning architecture, code quality, and production debugging myself. Comfortable taking a vague problem, breaking it into shippable pieces, and owning a feature from API design to deployment. Background includes real-money payment integration (Razorpay), JWT/RBAC auth systems, and systems built for scale (10,000+ concurrent users), all built and deployed independently.

CORE SKILLS

- Frontend: Next.js, React.js, TypeScript, JavaScript (ES6+), Tailwind CSS, Responsive Web Design
- Backend: Node.js, Express.js, REST API design, Webhook handling, Async workflows, MVC architecture
- Database: MongoDB, Mongoose ODM, PostgreSQL, Prisma ORM
- Auth & Security: JWT, OAuth concepts, Role-Based Access Control (RBAC), bcrypt
- AI-Assisted Engineering: Claude Code, GitHub Copilot — used daily to scaffold, debug, and ship faster while retaining full ownership of architecture and code review
- Integrations: Razorpay Payment Gateway (production, real transactions), third-party REST APIs, webhook-driven flows
- DevOps & Tooling: Git/GitHub, Vercel, Render, environment config & secrets management, CORS, Postman, CI/CD (learning)

PROJECTS — SHIPPED & IN PRODUCTION

Full-Stack MERN E-Commerce Platform

[Live Demo](#) | [GitHub](#)

- Owned the product end-to-end: architected and shipped full user lifecycle — auth, cart, checkout, order management, and an admin panel — deployed across Vercel (frontend) and Render (backend).
- Integrated Razorpay Payment Gateway handling real-money transactions, including webhook handling and live payment status tracking.
- Used AI-assisted workflows (Claude Code, Copilot) to scaffold routine CRUD and UI boilerplate, cutting estimated development time by ~30% while manually reviewing every architectural decision.
- Built JWT authentication with secure token-based password reset, and an RBAC-driven admin layer with clean role separation.
- Diagnosed and fixed production issues independently — CORS, environment config, deployment failures — without external help.

Doctor's Web Portal — Patient & Schedule Management System

[Live Demo](#)

- Designed for scale from day one: implemented server-side pagination and MongoDB indexing, reducing API response times by an estimated 40–50% under load, targeting 10,000+ concurrent users.
- Built a full Admin Dashboard with RBAC for patient records, doctor schedules, and report uploads.
- Took a feature from a rough problem statement to a deployed, working product — including all infra debugging — entirely solo.

Secure RESTful API with Authentication System

- Architected a clean MVC-pattern REST API (routes/controllers/models/middleware) with JWT auth, refresh tokens, and bcrypt hashing — built to be consumed by any frontend.
- Added input validation and standardized error-handling middleware for predictable, frontend-ready JSON responses.

ENGINEERING PHILOSOPHY & AI-NATIVE WORKFLOW

- Vibe engineering, not vibe coding: I use Claude Code and Copilot daily to move fast, but every architectural decision, debug, and production fix is mine — I can explain and defend every line that ships.
- Self-taught through building real, used products, not courses — every skill was earned by shipping, breaking things, and fixing them.
- Frugal, assembly-minded builder: default instinct is to find what already solves a problem (libraries, managed services, AI) before building from scratch.
- Comfortable with ambiguity — every project here started as a vague idea I scoped, built, and deployed without a spec handed to me. Currently deepening Docker, CI/CD, and cloud deployment (AWS/GCP).

EDUCATION

Higher Secondary Certificate (12th Grade) — JAC Board, India

Self-Directed Curriculum: Full-Stack Web Development, TypeScript, REST API Design, Database Architecture, Authentication & Security, AI-assisted software engineering practices
